Profile Summary

A dedicated **software developer** with **more than 4 years** of experience in modern software development across **local** and **international** teams, recognized for **strong time management**, **collaborative mindset**, and a **continuous drive to learn, grow and deliver**.

Skills

Domain Knowledge: ERP System, E-Commerce, Restful API & SaaS

Proficient Stacks: Python, Django, FastAPI, PostgreSQL, MySQL, Javascript, Typescript, ReactJs, NextJs, Bootstrap, Tailwind CSS, jQuery

Familiar Stacks: Docker, Linux administration, Codex AI, Cursor, AWS, Digital Ocean

Project Management Tools: JIRA, Trello, Slack, Notions

Other: Version Control Systems (Git), Unit Testing & Integration Testing

Languages: Khmer (Mother tongue), English (Advanced level), Japanese (Conversational)

Experience

Fullstack Developer, Phnom Penh, Cambodia

June 2025 – Present

Zeng 18 (Emart24)

HR Management System

- **Developed** a scalable **HR Management System**, automating attendance and payroll processes to reduce manual administrative work.
- **Built** a **responsive web application** for mobile, tablet, laptop, and desktop, providing a consistent user experience across devices.
- **Implemented** a **location-based Clock In/Out** feature with distance validation to enforce on-site attendance and improve record accuracy.
- **Created** an **Attendance Reporting** module, enabling HR to monitor employee activity and generate reports efficiently.
- **Developed** an automated **Payroll** workflow, simplifying salary generation while reducing processing time and human error.
- **Optimized** application performance, improving speed and responsiveness for both desktop and mobile users.
- **Maintained** production systems and **resolved** critical production issues, improving system stability and minimizing downtime.
- **Collected** user feedback and prioritized maintenance tasks, driving continuous product improvements.
- **Leveraged Codex AI** to accelerate development, increasing delivery speed while maintaining code quality.
- **Successfully deployed** the system to multiple organizations, supporting both internal teams and external clients, and **provided** long-term operational and technical support.

Mouy App

- **Leveraged agentic AI** to rapidly create design mockups and interactive prototypes, accelerating iterative design and development.
- **Managed multilingual localization**, ensuring translations were natural, professional, and contextually accurate across supported languages.

- Researched and implemented **secure session management** to improve authentication reliability and user experience.

Frontend Web Developer, Tokyo, Japan

Aug 2024 – June 2025

Kirirom Digital

- **Developed** a Next.js application to deliver AI-generated tech news videos, enabling users to consume news through synchronized video and audio content.
- **Implemented** video preview, download, and sharing features to improve content accessibility and encourage user engagement.
- **Designed** and **integrated** an intuitive user interface to simplify interaction with AI-generated video content, enhancing the overall user experience.
- **Successfully deployed** the application, providing users with an accessible platform for consuming AI-driven news content.
- **Increased user engagement** by enabling seamless video sharing and content distribution, and **delivered** a responsive, user-friendly experience across the application.

Software Developer, Phnom Penh, Cambodia

Jan 2024 – Aug 2024

Salacyber

Cybersecurity Lab Test Platform

- **Built** a full-stack web application with Django to simulate a cybersecurity lab environment, providing an interactive platform for hands-on security training.
- **Designed** and **implemented** an intuitive interface for managing AWS EC2 instances and retrieving lab scenarios, simplifying lab administration.
- **Developed** server-side validation and automated scoring logic to evaluate user submissions accurately and provide instant feedback.
- **Integrated** AWS services to automate EC2 instance provisioning and management, improving scalability and operational efficiency.

Point of Sale (POS) System

- **Developed** a full-featured Django-based POS system to streamline order management, enabling sellers to efficiently create, retrieve, update, and delete orders.
- **Built** dashboards for order tracking, inventory management, and sales reporting, providing real-time business insights for informed decision-making.
- **Integrated** interactive alerts with SweetAlert to improve user feedback and enhance the overall user experience.

Software Developer, Kampong Speu, Cambodia

Sep 2021 – Nov 2023

A2A town (Cambodia) Co., Ltd

A2A Odoo Upgrade

- **Developed** and enhanced Odoo ERP modules, including Market List, Inventory, Purchase History, and multi-company functionality.
- **Collaborated** with end-users and stakeholders to gather requirements and translate business needs into scalable ERP solutions.
- **Led** the Market List development team, coordinating feature implementation and delivering system enhancements.
- **Performed** data migration, unit testing, integration testing, and system maintenance to ensure stable and reliable ERP operations.
- **Worked** closely with Sales, CRM, Inventory, Purchasing, and Hotel Management teams to integrate business workflows and improve operational efficiency.

Education

Bachelor of Engineering, Software Engineering

October 2019 – November 2023

Kirirom Institute of Technology, Kampong Speu, Cambodia

High School Diploma

2016 – 2019

Net Yang High School, Battambang, Cambodia

Personal Projects

- **Developed** and **designed** a simple **landing page** for a cybersecurity company using **HTML, CSS, JavaScript** and **jQuery** — karpia.co
- **Led** a **team**, **developed** and **deployed** a side-scrolling **mobile game** using **Godot Engine** for a mobile game dev bootcamp in university.
- **Developed** a **web application** using **React, Tailwind, Redux** for a web app bootcamp in university.
- **Developed** a **website** using **React, Tailwind** for showcasing AI services on the market.
- Currently **creating structured lessons** and **teaching** young high school students the **Python** programming language.
- **Building** my own **E-commerce website** using **FastAPI**.
- **Developing** a **mobile application** to manage football team and time management using **Flutter**.
